Abstract (en)
[origin: WO0188304A1] The invention relates to a shaped bar for establishing a junction between a structural member (93), especially a frame part, and an adjacent building surface, especially an upper coating layer (92) of a wall or partition part or of an insulating layer (91), by means of a mounting leg (11) of a structural member and a protection tongue. Said protection tongue of the unitary shaped bar (10) is a flexible sealing lip (40) which covers the visible side of the expansion joint between the structural member (93) and the shaped bar (10).
