Abstract (en)
[origin: WO0190635A1] The invention concerns a power supply ramp consisting of a profiled section (30) comprising two wings each for receiving a conducting bar (10, 20) provided with contacts at regular intervals. The invention also concerns a method for making such a ramp, which consists in: simultaneously sliding two conducting bars along the wings of the profiled section; determining the spacing A between the electric contacts (12) of the first strip and those (22) of the second strip on the basis of the dimensions of the current consuming elements used; and in fixing the conducting strips into the profiled section.
