Abstract (en)

[origin: FR2809486A1] The invention concerns a heat exchanger module, comprising a main exchanger (1) and at least a secondary exchanger (2) having a body (3, 6), provided with tubes circulating fluid and mounted between two assemblies of manifold members (4, 7), such that a common air stream passes through the respective bodies of said exchangers. At least one manifold member (9) of the main exchanger comprises a projecting part (10) including cutouts (11) for receiving tubes circulating fluid of the secondary exchanger, locking means being provided to lock the secondary exchanger in the position wherein its fluid circulating tubes are engaged in said cutouts. The invention is applicable to motor vehicles.
