Abstract (en)
[origin: EP1156297A1] A small caliber deforming bullet made from copper-zinc alloy comprises an outer hollow cylindrical base body (1) with a base and a conical front region, and an additional body inserted in and overlapping the base body. The additional body is a partial cylindrical casing core (2), whose cylindrical part is held in a front position in the base body during the whole ballistic flight path over the whole length. A hollow chamber is formed between the base body and the core and comprises a plate-like chamber (3a) and a blind hole bore (3b) and/or a further peripheral annular chamber. The plate-like chamber extends over the whole cross-section of the core. An Independent claim is also included for a process for the production of a small caliber deforming bullet. Preferred Features: The base body and the core are made from the same copper-zinc alloy. An inner annular groove is provided on the front side of the base body.
