Abstract (en)  
[origin: WO0190827A2] The invention relates to an information processing system and method for operation thereof, comprising: a central communication unit (ZDS) for the control and forwarding of information from a data set, at least one master information processing system, which communicates with the ZDS by means of an interface and which provides information for the ZDS on demand, at least one client information processing system, which communicates with the ZDS by means of an interface and which obtains information from the ZDS on request. Said information controlled by the ZDS is described by an object model, which comprises an conceptional object model (KOM), which describes the total data set as provided by the master and client systems and the views which are dedicated to the connected systems and describe all specific services related to the KOM, determine the elements of the data sets controlled by the ZDS, which said systems recognise.
