Abstract (en)

[origin: WO0193094A1] The invention concerns a multiterminal publishing system, providing access to at least an application corresponding to a service for supplying to a plurality of terminals, in accordance with at least two different types of terminals, data contained in at least a data source. The invention is characterised in that the system comprises: at least a module (30, 301, 302, 303) for creating objects from raw data; a module (31) for generating response in a generic presentation format, in response to a request (51) made by a terminal concerning a given application; a presentation module (32), for transforming said reply in a generic presentation format specific to said terminal which has made the request.
