Abstract (en)
[origin: MXPA02011075A] A computer implemented real-time transaction point accumulation system in which an award program participant earns and accumulates points immediately in a centralized data storage for transactions at any one of a plurality of paint servers networked to a host incentive award system, wherein at each transaction, a program participant's identification number is transmitted to a program administrator host system which stores program participant records including program participant balances of points accumulated to date. One of the point accumulation servers is an employee engagement and incentive system that enables an employee that is a member of a company engagement and incentive program to earn and accumulate points in his or her role as an employee. The engagement and incentive system server awards behavior currency / points to an employee at the request of an authorized company nominator member as an award for the nominated employee exhibiting certain behavior that the company encourages.
