Abstract (en)
[origin: US2002158557A1] A device for establishing an adjustable connection between a drawer, having a panel and a bottom, and a furniture guide rail. The device comprises a base part adapted for connection to a drawer and a detent element adapted for connection to a guide rail. The base part and detent element are interconnected so that the tolerance between the drawer and guide rail may be adjusted along a displacement axis and then maintained in the adjusted position. A manually operable element is provided for adjustably moving the base part and detent element with respect to each other.
