Abstract (en)

[origin: EP1285708A1] The bending process requires the use of a bending head with a bending abutment (5) and a bending jaw (7). The bending abutment can be turned against one side of the strip (2), while the jaw can be laid against the outside of the strip. For bending, the abutment and jaw are moved at the same time, so that the sector of the strip to be bent is held between them.
