Abstract (en)
The invention relates to a device for spreading salt, which device comprises: a supply container for the salt, transport means arranged under the supply container for transporting a layer of salt from the supply container to a discharge area; spreading means placed under the discharge area of the transport means for spreading the salt; and loosening means for loosening the layer of salt in the discharge area, wherein the loosening means are drivable and make a substantially linear movement directed transversely of the transport direction. <IMAGE>
