Abstract (en)

[origin: FR2809970A1] The procedure, using an installation with a main line (3) which has a feed duct (4) at one end for a tinted base and a spray gun (14) at the other, consists of introducing at least one hardener into the main line through a secondary line (16), measuring the flow of the base/hardener mixture in the main line and adjusting the flow of hardener(s) to achieve the predetermined volume ratio. The flow of the mixture is controlled by a pressure regulator (10), and the secondary line is equipped with a motor and pump assembly (23, 24).
