Abstract (en)

[origin: WO0168274A2] The invention relates to a method for the creation and distribution of flat mailings for circular posting, whereby document files (5), with corresponding recipient details, are electronically transmitted to service centres (30), by means of "Hybrid Mail" technology, whereupon the mailings for the recipients are automatically generated. In the regional service centres (30) for recipients, the transmitted document files (5) are sorted according to the recipient and the mailings are generated in order of recipient, whereby the sequence of the distribution sequence is matched to the individual distributor.
