Abstract (en)
[origin: WO0185789A2] Ryk protein was found to have a novel activity in regulating angiogenesis. New variant Ryk proteins were constructed that were useful in modulating the capillary forming activity of endothelial cells. Variant Ryk proteins, may be employed as therapeutics in diseases such as cancer, wound healing, diabetic retinopathies, macular degeneration, and cardiovascular diseases, and other diseases or clinical conditions where angiogenesis is relevant to the causation or treatment of the disease.
