Abstract (en)

[origin: WO0179466A2] Reagents which regulate human epithin-like serine protease activity and reagents which bind to human epithin-like serine protease gene products can be used to regulate extracellular matrix degradation. Such regulation is particularly useful for treating metastasis of malignant cells, tumor angiogenesis, inflammation, atherosclerosis, neurodegenerative diseases, and pathogenic infections.
[origin: WO0179466A2] Isolated human epithin-like serine protease. Human epithin-like serine protease gene products can be used to regulate extracellular matrix degradation. Such regulation is particularly useful for treating metastasis of malignant cells, tumor angiogenesis, inflammation, atherosclerosis, neurodegenerative diseases, and pathogenic infections.
