Abstract (en)
[origin: WO0188286A1] The invention concerns a product dispenser for toilet bowls, comprising catching means (8) on a bowl and a reservoir (1) of liquid product communicating with a tube (10). The reservoir has in its lower part a free opening (22, 15) having a size preventing the flow of liquid when there is no flushing. When flushing occurs, the liquid flow in the neighbourhood of the tube or along it, or the upflow of water in the tube causes the liquid to be dispensed outside the dispenser by hydrodynamic effect. The invention enables the dispensing of the liquid only when flushing occurs, independently of the flushing frequency, and without any mobile parts.
