Abstract (en)

[origin: WO0187235A2] A method for producing [$<18>F$]fluoride ion comprises loading an enclosed chamber of a metal target with [$<18>O$]oxygen gas. The [$<18>O$] oxygen gas is irradiated in the enclosed chamber to produce [$<18>F$]fluoride ion in the chamber. The produced [$<18>F$]fluoride ion is removed from the chamber without opening the target, preferably by introducing a solubilizing agent into the enclosed chamber to solubilize produced [$<18>F$]fluoride ion and removing the solubilizing agent and produced [$<18>F$]fluoride ion from the enclosed chamber without opening the target. The remaining [$<18>O$]oxygen gas is removed from the chamber for reuse prior to removing the [$<18>F$]fluoride ion from the chamber. The produced [$<18>F$]fluoride ion is reactive and can be used to produce radiolabeled compounds such as 2-deoxy-2[$<18>F$]fluoro-D-glucose.
[origin: WO0187235A2] A method for producing [$<18>F$] fluoride ion comprises loading an enclosed chamber (16) of a metal target with [$<18>O$]oxygen gas. The [$<18>O$] oxygen gas is irradiated in the enclosed chamber (16) to produce [$<18>F$] fluoride ion in the chamber (16). The produced [$<18>F$]fluoride ion is removed from the chamber (16) without opening the target, preferably by introducing a solubilizing agent into the enclosed chamber (16) to solubilize produced [$<18>F$] ion from the enclosed chamber (16) without opening the target. The remaining [$<18>O$]oxygen gas is removed from the chamber (16) for reuse prior to removing the [$<18>F$]fluoride ion from the chamber (16). The produced [$<18>F$]fluoride ion is reactive and can be used to produce radiolabeled compounds such as 2-deoxy-2[$<18>F$]fluoro-D-glucose.
