Abstract (en)
[origin: DE10124378A1] The device has at least one coil winding in or on a plastic or ferrite bearer (1) with outwardly protruding connection journals (1.1), about each of which one end (2.1) of the coil winding is wound in several turns. A metallised wire winding (3.1) of electrically conducting wire with diameter greater than that of the coil winding wire is arranged between the journals and the coil winding wire ends and is wound directly onto the journal. AN Independent claim is also included for the following: a method of manufacturing an inventive device.
