Abstract (en)

The adapter has a connection element (1) for positive connection to a tie rod of the tool, and an adhesive surface (4), integral with the connection element, for adhesive application. The adhesive surface is arranged, so that adhesion of the adhesive on the surface is greater than adhesion of the adhesive on the body part to be repaired. The adhesive surface is lacquer-coated, and has individual conical, cylindrical, or rib-shaped projections (5), and recesses (6). The connection element has a wide head (2).

Abstract (de)

Bei einem Klebeadapter, der zusammen mit einem Ausbeulgerät verwendet werden soll, wird vorgeschlagen, die Klebefläche (4) des Adapters derart auszubilden, dass die Klebeschicht an der Klebefläche (4) des Adapters stärker haftet als an der lackierten Blechfläche des auszubeulenden Blechteils. <IMAGE>
