Abstract (en)
[origin: EP1288097A2] The system consists of a number of track modules (10) and lifting modules, each of a length corresponding to a modular dimension or a multiple thereof. Studs are set into the floor of the workshop in two parallel rows and at relative distances corresponding to the modular dimensions. Track and lifting modules have bores acting with first connection elements. Support modules (24) have bores acting with the studs, and further studs within their roof area, which act with retainers in the track modules. Lifting platforms (32) next to the support modules can be connected to projecting arms (20) of the lifting modules.
