Abstract (en)

[origin: EP1288142A1] The container (2) for a pressurised product has a valve (11) with a stem (12) and a dispensing head (10) with an element (20) which has one end attached to the valve stem and the other to an outlet orifice (38). A second element (40) of the dispensing head has an orifice (48) and can moved between two positions - one in which the orifice is closed by the first element and another in which is is open and linked with the valve to dispense the product. The movement of the second element relative to the first is made transversely with regard to its axis.
