Abstract (en)  
[origin: EP1288367A2] The device has a drying chamber in a housing, a dehumidifying unit and a heating element; heated air is fed from below into the drying chamber. An air induction opening(s) is arranged in the central height region of the drying chamber and an air outlet opening(s) in the upper region. Moist air from the drying chamber passes through the induction opening into the dehumidifying unit; dry air passes via the outlet opening to the drying chamber. The device has a drying chamber (2) enclosed by a housing (1), a dehumidifying unit (8) and a heating element (5), whereby heated air is fed from below into the drying chamber. At least one air induction opening (7) is arranged in the central height region of the drying chamber and at least one air outlet opening (6) in the upper region. Moist air from the drying chamber passes through the air induction opening into the dehumidifying unit and dry air passes via the outlet opening to the drying chamber.
