Abstract (en)
[origin: EP1288400A2] The structural fixture sub-construction (10) for a door grip shield or window grip rosette involves a plastic under-part (12) covered by a cap (42) or a shield and which has a flat rear surface (14), from which a central bush (16) and an all-round edge (18) extend. Between the all-round edge and the bush a metal stiffening piece (20) is provided. The stiffening piece is a steel ring disk located on the same axis in the under-part. The ring disk with its central hole (22) engages over the bush and is limitedly rotatable relative to it. With its outer periphery (24) the ring disk is placed on or in the all-round edge.
