Abstract (en)

[origin: EP1288426A2] The short arm of the insert or spacer block (46) has a cross-section chosen so that the arm extends the height of a turn-back on the outside of the door or window frame (14) and completely fills the space between the outside of the glass (12) and opposing inside surface of the turn-back. The insert or spacer block is used to support and hold a glass pane inside a door or window frame and has a long arm for applying against a glass rabbet in the frame and at least one short arm extending at right angles to the long arm.
