Abstract (en)
[origin: EP1288839A2] The present invention adds, to an endoscopic image filing apparatus for filing endoscopic images, patient information, and the like generated at the time of endoscopic examinations performed by means of an endoscope apparatus, a function to manage examination schedules and to newly create endoscopic examination schedules automatically by referring to the schedules thus managed. When, upon setting the endoscopic image filing apparatus to an examination information editing window, a user specifies a patient who is to undergo an examination and designates an examination room and examination date, a schedule for an examination of the patient is automatically created on the basis of schedules already registered, in a time zone not reserved for another examination, whereby user labor can be alleviated and resources such as examination rooms can be utilized effectively.
