Abstract (en)
[origin: DE10025011A1] The cycle lock which links wheels and cycle frame has a guide and locking part (1) with two oppositely mounted spindle sleeves (2, 3) and with semi-circular holding elements (4,4') at the outwardly aligned free ends. The holding elements are brought into active connection in the shortest radial spacing between the wheels with the guide and locking part for a locked position. At least one spindle sleeve has a locking arm (6) which engages over the length for securing. The locking arm is set in connection with a movable pawl set in the locking guide part.
