Abstract (en)
[origin: WO0196215A1] The invention relates to a system which especially comprises individual containers for receiving confidential documents, and a collection container into which said individual containers can be emptied. The aim of the invention is to ensure that confidentiality is maintained until the documents are destroyed. To achieve this, each individual container can only be opened when it is completely surrounded by the collection container, thereby ensuring that the documents cannot be accessed at any time from the moment they are placed in an individual container until the moment they are destroyed.
