Abstract (en)
[origin: WO0194605A2] Disclosed are methods for the use of cytokine or cytokine receptor-encoding polynucleotides in the creation of transformed host cells and transgenic animals is disclosed. In particular, the use of recombinant adeno-associated viral (rAAV) vector compositions comprising polynucleotide sequences that express one or more mammalian cytokines or cytokine receptor polypeptides is described. Also disclosed are methods for the treatment and amelioration of symptoms of a variety of conditions and disorders in an animal, including blindness, retinitis pigmentosa, age-related macular degeneration, obesity, anorexia, and related eating disorders, as well as neurological and musculoskeletal disorders, including for example, amyotrophic lateral sclerosis.
