Abstract (en)

[origin: WO0196966A1] The invention concerns a watch, conventionally comprising: an electronic movement including a control circuit (24, 26, 32) and a motor (28) controlled by said circuit, and time display means comprising at least two hands (12, 14) driven by the motor (28) and moving in front of the dial (10) to indicate hours and minutes. Said watch is characterised in that it further comprises a second motor (38) controlled by the control circuit, and an additional hand (16) driven by said second motor. The circuit (32) is so designed as to enable the second motor (38) to drive said hand (16) along a complete cycle in one week, in alternating periods stopping and displaying time between two given times.
