Abstract (en)
[origin: WO0188670A2] The invention relates to a method for providing licenses and access authorizations of software components or for instantiation of software objects by the acquisition of value points (WP), wherein every software module or instantiation of a module is associated with a defined number of value points (WP). Licensing is based on a comparison of the acquired value points (WP) (value point credit) with the value points (WP) (value point debit) required for the application.
