Abstract (en)  
[origin: WO0184370A2] An enhanced hyperlink and method for providing an enhanced hyperlink are provided. This invention permits the user to interact with a hyperlink in a variety of ways without necessarily having to open and/or follow the hyperlink. This is accomplished by detecting the presence of a cursor near a hyperlink. After detecting the hyperlink, a toolbar is displayed containing one or more link enhancements that the user may select. In response to the users' selection of a particular link enhancement, that link enhancement function would be performed without requiring any further action by the user.
