Abstract (en)
[origin: WO0182278A1] A new and improved flexible hand held multiple message banner and signage device (10) and method of making same is provided. The present device (10) enables a selective display of multiple messages (A, B, C, D, E, F) on a maximum surface area for viewing from long distances by providing multiple panels (1, 2, 3) joined together by a hinge mechanism (15, 19, 26) which allows the panels (1, 2, 3) to be displayed either vertically or horizontally. The flexible nature of the device (10) allows the device (10) to be transported or stored in a compact form when not in immediate use. Both front and back surfaces (12, 14) of the panels (1, 2, 3) will be used to display messages (A, B, C, D, E, F) thereby increasing the surface area of signage to it's maximum potential. This flexible hand held multiple message banner and signage device (10) may be tailored to a number of different usages and circumstances.
