Abstract (en)  
[origin: EP1291479A1] The lock comprises a case (101) with two parallel walls (102), a faceplate (110) perpendicular to the walls and a bolt (200) shaped to be supported on an internal face (112) of the faceplate by tipping against it. The bolt occupies one or other of two stable positions. A movable locking assembly (300,400) is acted on by a first spring (415) towards a bolt locking position. There is a disabling sensor (800) which prevents the locking assembly from reaching the locking position.
