Abstract (en)

[origin: DE10014543A1] A medium is supplied in a container under an admission pressure or without pressurization, and subjected to pressure and expelled under the action of the pressure generated. The pressure is generated by the formation of combustion gas as a consequence of a chemical process, and acts directly or indirectly on the medium to bring it to a higher pressure level. The pressure may be generated by the combustion gases of explosives. An Independent claim is included for an associated process.
