Abstract (en)

[origin: WO0198018A1] The aim of the invention is a method for connecting a component made from a shape-memory alloy to a thin component made from a steel material or a copper material. According to the invention, a spot-welding technique is provided by means of Cu alloy electrodes. The current strength applied shall be over 1000 A, preferably over 2000 A, at an $I<2>t$ value of over 5000 A $<2>s$, preferably over 8000 A $<2>s$, and a compression pressure of at least 30 MPa, preferably 80 MPa.
