Abstract (en)  
[origin: CA2412937A1] Methods of creating tamper resistant informational articles and related products are disclosed. In one method a metal foil (12) has a hologram (60) formed therein after which information is created on the metal foil at least partially over the hologram and the foil is encapsulated in a resinous plastic material (100). In another embodiment, a tamper resistant informational article is provided by creating a base having an upper surface and a lower surface with an elongated metal core having extruded therearound a resinous plastic material. A magnetic media storage element is secured to this base. A lens is created by providing an elongated transparent layer, forming a hologram in the lower surface thereof and applying information to the hologram. The lens lower surface is then secured to the base upper surface. Particles which resist photocopying may be incorporated in the resinous plastic material.</S DOAB>
