Abstract (en)

[origin: WO0166454A2] A method for allocating calls entered via the landing call devices of elevators belonging to an elevator group so that there are simultaneously at least one floor to be signaled according to the service routes of the elevators. The allocation decision is made by a genetic allocation method. The allocation decision is input into a call fixation control unit, which takes care of the reservation and release of landing calls and the control of signaling. In the case of a reserved landing call, the range of values of the gene is limited.
