Abstract (en)
[origin: DE10027813A1] Two first fixers (5) engage the housing cover (4) at spacing along an hypothetical straight line spanning the pressure field, preferably along the center axis of the housing cover, the fixers thus set at the cover corners. The fixers engage openings (17) in the cover and a set of second fixers on the cover span suction area, giving fixers at all four corners of the preferably square housing cover. Each fixer is set at 90 deg to the adjoining fixer and the first pressure plate (10) is faced by a second pressure plate with feed medium inlet or outlet (19,21). The pressure plate at the cover is hollowed out where it faces the outlet of the second plate.
