Abstract (en)

[origin: WO0198682A2] Friction materials which contain at least one fluoropolymer material for use in friction linings for applications such as, but not limited to brake disk pads, are described. The fluoropolymer material, such as, but not limited to PTFE, FEP, and PVDF, is preferably present in an amount of from about 0.1 to about 5 weight percent, based on the total weight of the friction material matrix.
