Abstract (en)

The present invention relates to an improved handgrind and/or polish apparatus or device (1,11) for removing scratches on several kinds of surfaces (7), such as glass, natural stone, plastic and such, in which the device can be constructed in a surprisingly inventive way in an electric or pneumatic version, in which the eccentric rotating basic head (14,15) with hook and loop connection is attached to polishing discs (2,3) for working on the surfaces (7), in which the whole is surrounded by rubber covers (4,5) to collect the liquid with grinding dust completely and keep a clean working environment. <IMAGE>
