Abstract (en)

[origin: FR2829116A1] Container (10) has an outlet (14) with a valve (15), with the applicator (102) forming part of an assembly (100) that opens the valve when fitted to the container. The applicator is mounted in a holder (101) with an inlet containing a second valve that opens when pressed against the container outlet valve, the latter being spring-loaded so that it closes when the applicator holder is removed. Container (10) has an outlet (14) with a valve (15), with the applicator (102) forming part of an assembly (100) that opens the valve when fitted to the container. The applicator is mounted in a holder (101) with an inlet containing a second valve that opens when pressed against the container outlet valve, the latter being spring-loaded so that it closes when the applicator holder is removed. The applicator, made from a foam, felt or composition material, is covered by a cap (103) containing a tablet (P2) of an auxiliary product such as a compressed powder, creme or gel.
