Abstract (en)

[origin: EP1293621A1] The panel (3) support (2) has two parallel L-shaped sides (5) joined at their farther ends by crossplates (6) to make a welded frame. One leg (21) of the support (2) adjoins the building structure (4) and is screwed to this (4) by a screw led between the two side parts (5). The legs (21,22) of the support differ in length, the longer leg (22) joined to the building. The panel (3) rests on support (2) face surface (7), with the support reaching into recess (8) in the panel (3). The support face (7) is at an angle and slopes down towards the building (4). Adjuster screw (10) changes the horizontal space between support and panel, with the screw head lying in the panel recess (8).
