Abstract (en)

[origin: EP1293728A2] The method involves setting complete combustion of a combustion gas air mixture fed to a gas burner by determining the burner's output heating power and the required air ratio for complete combustion, setting the input air rate depending on the output power and air ratio and setting the air ratio by adjusting the input combustion gas rate with the input air rate held constant at the value set. AN Independent claim is also included for the following: a cooker for using the method.
