Abstract (en)  
[origin: EP1293956A2] The advertising poster display case, with a poster change function, has a control group (3) to control the two motors (1,2) through an end stage (18) and an electronic rotation direction reverse control (19). A dual inline pin (DIP) switch (21) sets the exposure time of each poster. A door contact (12) disconnects the control system when the display case is opened. A non-contact sensor (13) is accessed to show the poster position. The current supply is from a 24 V net at the case, and the case illumination (14) is controlled by an external timer. The control group has a RS232 interface (15) for the connection of a fault-reporting modem and preferably a digital European cordless telephone (DECT) modem MD32 or a radio modem.
