Abstract (en)
[origin: EP1294154A2] In order to improve upon a degradation in performance due to inter-carrier interference without loss of transmission efficiency, antennas (111 to 114) provided on a mobile body are made directional antennas. An antenna selection unit (15) selects a directional antenna in such a manner that Doppler shift that is caused by movement of the mobile body will keep a constant sign that is positive or negative, a fading-variation calculation unit (18) calculates the average value of fading variation on each path of a multipath environment, and a fading-variation compensation unit (19) compensates the multipath fading variation based upon the average value. <IMAGE>
