Abstract (en)

[origin: WO0200058A1] The invention concerns a depilatory appliance comprising a housing (7) containing an electric motor driving a rotary system (1) with hair-pinching devices and means for actuating a cyclic closing/opening movement of at least a hair-pinching device (2, 3) for pulling out skin hairs, said appliance comprising at least a mobile element (12) arranged proximate to the depilatory head designed to be urged in close contact with the skin. More particularly, the invention is characterised in that said element (12) provides a massage by moving in the skin plane while the hairs are being removed.
