Abstract (en)
[origin: WO0197824A2] The invention relates to the use of one or more phyllanthus constituent(s) or substances or substance mixtures obtained therefrom for preventing or treating infection diseases, which are caused by viruses of the family of Flaviviridae or which are involved in the development or progression of viruses of the family of Flaviviridae. The invention also relates to the use of one or more phyllanthus constituent(s) or substances or substance mixtures obtained therefrom for producing a medicament used in the prevention or treatment of infectious diseases, which are caused by viruses of the family of Flaviviridae or which are involved in the development or progression of viruses of the family of Flaviviridae. The invention additionally relates to the use of one or more phyllanthus constituent(s) or substances or substance mixtures obtained therefrom for inhibiting the multiplication of viruses of the family of Flaviviridae. A method is also disclosed for preventing or treating infectious diseases in a mammal, which are caused by viruses of the family of Flaviviridae or which are involved in the development or progression of viruses of the family of Flaviviridae, whereby one or more phyllanthus constituent(s) or substances or substance mixtures obtained therefrom is/are administered to the mammal. Additionally disclosed is a method for inhibiting the multiplication of viruses of the family of Flaviviridae, whereby one or more phyllanthus constituent(s) or substances or substance mixtures obtained therefrom is/are brought into contact with the viruses. A preferred virus is the hepatitis C virus.
