Abstract (en)
[origin: WO0200365A1] The invention relates to a strip processing device, comprising at least one reeling off station, at least one strip processing station (1) and at least one reeling on station. The aim of the invention is especially to reduce unwanted strip edge tensions. To this end, a known device for processing strip is configured in such a way that a strip stretching station (2) for stretching the strip edges is provided between the reeling off station and the reeling on station.
