Abstract (en)

[origin: WO0200518A1] The invention concerns an envelope (100) consisting of a heat-shrinkable plastic material for tightly enclosing with a main portion (101) at least part of said object, said sleeve including a matching flap (103) extending on the outside in superimposed connection with the main portion (101) by two parallel weld lines (102, 105), said flap including a portion forming a tearaway tab (115). The invention is characterised in that an adhesive strip (120) extending along a generatrix of the sleeve is provided on the outer surface of the main portion (101), said strip serving to maintain the object flat (10) in the pocket formed by said matching flap, so that said object is enclosed at the rear of the detachable stub (115) and can be recuperated once said tab is detached.
