Abstract (en)

[origin: WO0202665A1] The invention relates to reactive mixtures of substances that comprise or consist of (A) at least one polyisocyanate whose isocyanate groups are partially or completely blocked by propargyl alcohol, (B) at least one component that contains, with a statistical average, at least two isocyanate-reactive functional groups in the molecule, and (C) at least one catalyst that catalyzes the addition of the isocyanate-reactive functional groups of (B) to the acetylenically unsaturated triple bond of the propargyl groups. The invention further relates to the use of said mixtures as coating agents, adhesives or sealing agents.
