Abstract (en)
A sunroof sunshade assembly (10) is provided for a vehicle that include spaced apart guide rails (18) supported by a vehicle. The sunroof sunshade includes a frame (22) including opposing lateral portions (24) slidably received in the guide rail with the lateral portions having a first thickness. An interior portion (32) is integrally formed with the frame by a plastic injection molding process. The interior portion extends between the lateral portions with a plurality of tiny holes (34) in a desired pattern and has a second thickness that is less than the first thickness to provide a simulated fabric mesh appearance. A finger cup (30) may be formed in the frame to provide a recess by which a vehicle occupant may move the sunshade between the open and closed positions. <IMAGE>
